Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claim 1 (previously presented): A method comprising: providing a low voltage signal to a liquid crystal cell; and

driving a data electrode of the liquid crystal cell with the low voltage signal, the low voltage signal comprising a value obtained via a single variable linear function for temperature compensation.

Claim 2 (original): The method of claim 1, wherein providing the low voltage signal comprises providing a pulse width modulated signal.

Claim 3 (original): The method of claim 2, wherein the pulse width modulated signal comprises variable width square wave pulses.

Claim 4 (original): The method of claim 2, further comprising providing the pulse width modulated signal at equal to or less than approximately 3.3 volts.

Claim 5 (original): The method of claim 1, further comprising providing a frame update to the liquid crystal cell.

Claim 6 (original): The method of claim 1, wherein driving the liquid crystal cell comprises causing an optically digital response in the liquid crystal cell to a digital signal.

Claim 7 (previously presented): The method of claim 1, further comprising driving the liquid crystal cell at a frequency greater than 120 Hertz to output data of a first color and a second color and driving a second liquid crystal cell to output data of a third color.

Claim 8 (previously presented): The method of claim 7, further comprising driving the liquid crystal cell with a color sequence having at least two colors via an incident light that passes through a color wheel having the at least two colors.

Claim 9 (original): The method of claim 1, further comprising retarding an output of the liquid crystal cell by less than a quarter wave.

Claim 10 (cancel)

Claim 11 (canceled)

Claims 12 - 14 (cancel)

Claims 15 and 16 (canceled)

Claims 17-20 (cancel)

Claim 21 (canceled)

Claims 22 - 25 (cancel)

Claim 26 (canceled)

Claim 27 (previously presented): An article comprising a machine-readable storage medium containing instructions that if executed enable a system to:

form a low voltage signal;

provide the low voltage signal to a liquid crystal cell; and

drive a data electrode of the liquid crystal cell with the low voltage signal, the low voltage signal comprising a value obtained via a single variable linear function for temperature compensation.

Claim 28 (original): The article of claim 27, further comprising instructions that if executed enable the system to drive the liquid crystal cell with a low voltage pulse width modulated signal.

Claim 29 (previously presented): The article of claim 27, further comprising instructions that if executed enable the system to provide a first frame update to the liquid crystal cell from a first frame buffer.

Claim 30 (previously presented): The article of claim 29, further comprising instructions that if executed enable the system to store a second frame update in a second frame buffer while the first frame update is provided to the liquid crystal cell from the first frame buffer.

Claim 31 (cancel)
